Chapter 1 Software Instruction

1.1 Summary

This is a Central Control Software with powerful function and Distributed Architecture, integrate many windows, users ,languages, bidirectional Talk, video conference, Classic of electronic map, alarm center, be compatible with Other extended products and single directly connected devices surveillance system as one.

This software is only for connecting DVR, the manual only describes the software, for specific equipment features, please refer to related product manuals.

1.2 Features

1.2.1 User and Authority management.

Support N level organization management, user management and authority setup.

1.2.2 Data interface technology adopted.

All dates adopt data interface technology, so it can support every database sizes very Flexibility, such as SQL, MYSQL, and XML data and so on.

1.2.3 Support EXCEL edit to add device.

The platform support the user adopt Excel to add and edit devices, it's very convenience for user to maintain quantities of devices, improve system's usability and greatly reduce many works for maintenance

1.2.4 Intelligent Video Transport Protocol.

Intelligent Video Transport Protocol can do Maximize the use of network bandwidth, especially on the condition of Front-end network bandwidth limited, when to assure system based on high quality Image in very low network bandwidth, it can work well.

1.2.5 Scalable distributed network architecture.

Support multi servers running Coordinated, Intelligent load balancing, Flexibility to add server and Enhance the system capacity Effectively on the condition of Integrity assurance.

1.2.6 Perfect video monitoring.

While real time monitoring, system support alarm, recording, auto monitoring record, playback and so on, it can exactly control each channel recording status.

1.2.7 Dynamic regulation decoding buffer.

Flexibility in adjusting the fluency/real-time of video images when real time monitoring which can meet different user's need.

1.2.8 Adopting shelf technology

Modular Development and flexibly assembled applications.

1.2.9 Central management.

Centralized management of data throughout the system and Forwarding of data to provide the perfect multi-user real-time monitoring program. Remote users can real time monitor, record and playback through network.

1.2.10 Easy operation

In access control, Users can easily control and set each monitor point through the system, it also could integrate E-map.

1.2.11 High integration level

The system integrates other related in formations, like Alarm and Voice etc...

1.2.12 High reliability

The system designs a special Fault tolerance measures to assure data Integrity and system running dependability.

1.2.13 Good scalability

The system designs for Service, has good Scalability and Adaptability to maximally protect user investment.

1.2.14 Support Network management and load balancing.

1.2.15 Support multi devices upgrade volume via network.

1.2.16 Support User DIY interface and multi languages.

1.2.17 Support 4 channels real time playback.

1.2.18 Support connecting multi devices and view many videos (real time monitoring and playback)

1.2.19 XML data storage

Chapter 2 Installation instruction

2.1 Environment request of running

2.1.1 Hardware.

CPU P4/2.0G

Graphics must support hardware scaling (such as ATI, TNT2 and PRO, but suggest ATI9800 or above, dual channels, Memory (over 128M)/128bit

Note: it needs good configuration for memory, graphics and CPU If many screens need to be decompressed.

Netcard: 100/1000M

2.1.2 Software.

This CMS can run under Vista, Win XP, Win2000, Win2003 and Win2007, it's not suggestion for windows 98.

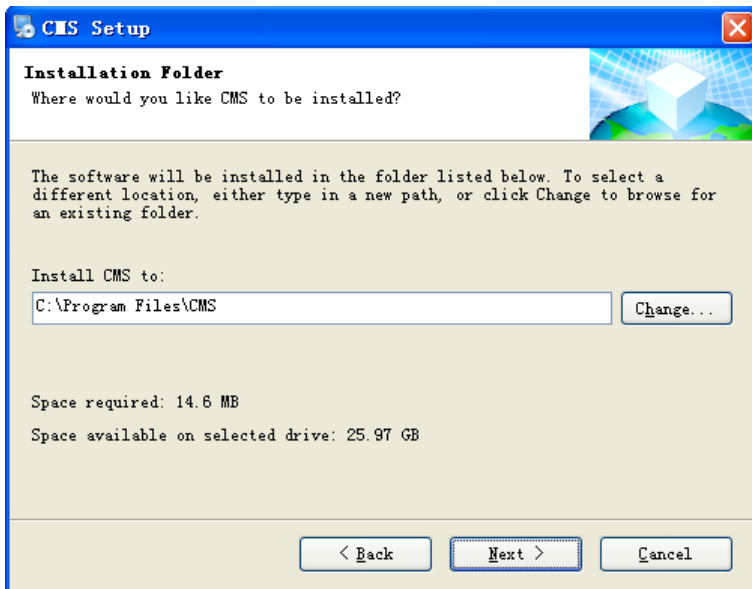

Please close all Antivirus Software and firewall so that it can write running program correctly and completely in the control center before installing the software, or it will not search any devices.

2.2 Installation step

2.2.1 Find " CMS_Eng_V1.0.0.2.T.20110722.exe " in the CD and run it like below picture.

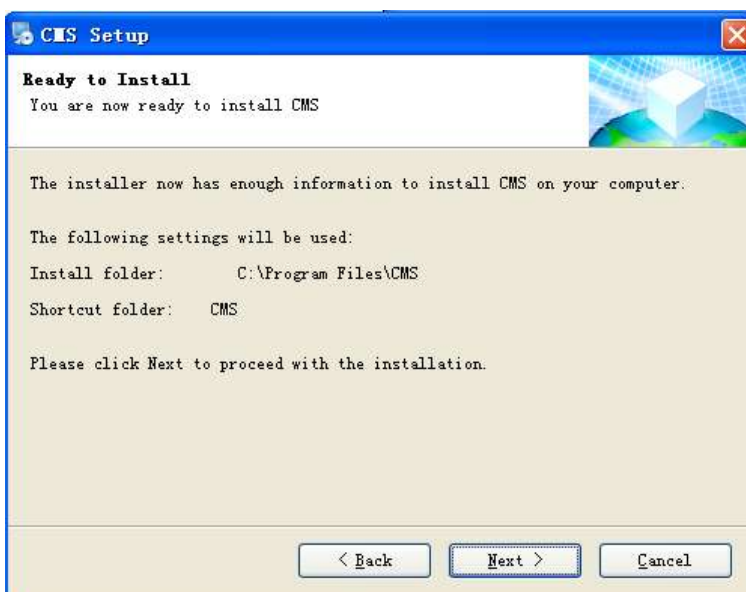

2.2.2 Click "Next", then go to the below picture.

2.2.3 Click "Next", then choose the available user for this shortcuts like below picture.

2.2.4 Click "Next" to start setup and end setup like below picture.

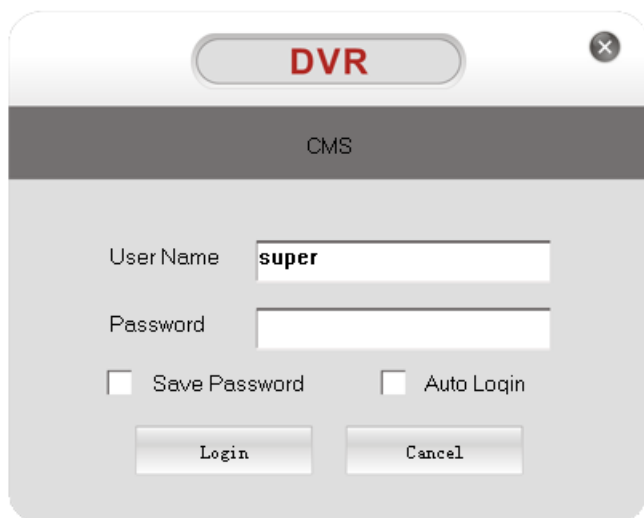

2.2.5 Click "Finish" to end the setup, at the time it will come up this icon in the desktop

Please follow Chapter 3, 4, 5 instructions to operate this software after finishing installation.

2.2.6 Login

The image shows a login window titled "DVR" with a close button in the top right corner. Below the title bar is a dark grey header with the text "CMS". The main area is light grey and contains the following elements:

- A "User Name" label followed by a text input field containing the text "super".
- A "Password" label followed by an empty text input field.
- Two checkboxes: "Save Password" and "Auto Login", both of which are currently unchecked.
- Two buttons at the bottom: "Login" and "Cancel".

The default user name is super, and default password is blank (no need to enter). You can choose to save the password and auto login when next time you open the software.

After the loading is finished, the main menu will display.

Chapter 3 Introduction of basic functions

3.1 CMS Operation Main Menu

Double click the device name to login the device, and then right click to choose to view the video.

3.1.1 Device display area

In this area, you can preview live screens by device and super account administrator setting, click device name or channel group to change channels.

3.1.2 Operation area

You can preview live screens, and setup parameters when system configuration and video searching in this area.

3.1.3 Time

3.1.4 Video disk status area

It can display the rest disk spaces where video files store

3.1.5 PTZ

3.1.6 Operation log

It will display alarm and operation information when setup and operating.

3.1.7 Menu Area

Users could set single menu and sub-menu in this area, select relevant menus to operate video surveillance system in the control center.

Diagram 1 Menu Configuration

No.	First Menu	Second Menu	Third Menu	Function & Instruction	Operating right
1	Preview			Click preview button "Monitor" to choose a preview of the screen, touring & switching among all channels and snapshot pictures of the screen. Shut down/open preview menu	Admin/User
2	PTZ			Controlling the speed cameras to go up, down, left, right and stop by operating panel, adjusting speed, zoom, focus, iris and auto pan, preset and tour.	Admin/User
3	Color			Set brightness, contrast, saturation and hue for video screen	Admin/User
4	System	Device manager	Add zone	Add zone for all devices	Admin/User
			Add device	Add video surveillance devices	Admin/User
5			Modify	Modify device name, ip address, user name and password	Admin/User
6			Delete	Delete video surveillance devices	Admin/User
7		Local Config	Base config	Select disk, disk list and logs maintenance	Admin/User
8			Alarm setting	Enable audio activated by alarm	Admin/User
9		Account	Group	Add and delete users' operating rights	Admin
10			User	Add, delete and manage users: Set user name, password and operating rights of menu	Admin
11		Local Log		Search alarm log and operation log in set time area.	Admin/User
12			Playback	Search record file and playback	Admin/User
13	Record		Record Plan	Set record time for every day	Admin/User
14	Advance	Decoder		Set DVR and decoder	Admin/User
15		Map		Using this map,it can visually show every cameras location and find current monitoring page directly	Admin/User

Chapter 4 Monitor

In the menu area, click "Monitor", it will turn to preview screen.

Monitor functions: Preview, PTZ and video specification configuration.

4.1 Preview

Diagram 2 Functions and instructions of preview

No.	Button	Meanings
1		click it to preview full screen for every channel
2		click it to preview 4 screens
3		click it to preview 9 screens
4		click it to preview 16 screens
5		click it to preview 25 screens
6		click it to preview 36 screens
7		click to to preview 64 screens
8		click it to enter full screen interface

4.2 Right-click Menu

At operating area, user can do below operation by right-click:

Close window: close the current screen

Close all windows: close all the current screens

Audio: click it and hear the voices from preset screens

Local record: click it to record at current channel and save the record at the relevant disk.

Snapshot: Capture pictures from current channel at any time and save it to relevant disk.

Start talk: start the bi-direction talk.

Device config: click it and go to device configuration interface.

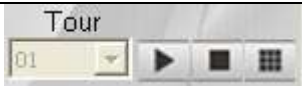

Color Setting: adjust the color setting of the video.

View Full: Enable full view mode.

4.3 PTZ Control

When speed cameras are connected with DVR, user can control it at this center, turn up, down, left and right, stop running, adjust turning speed, zoom, focus and iris, preset and tour configuration. When user enable touring function, the speed cameras will tour according to preset.

Function:

No.	Button	Meanings
1		 means "turn",  means "stop turning"
2		Drag this pole to adjust speed rate
3		Click + to zoom in; Click - to zoom out
4		Click + to focus in; Click - to focus out
5		Click + to iris it; Click - to iris out
7		Set a location for the preset, calls the preset points, PTZ automatically turns to the setting position, add, delete and config preset point
8		Multiple preset points connected tour lines, call touring between points, the PTZ run around on the line

4.4 Color

No.	Button	Meanings
1		Brightness
2		Contrast
3		Saturation
4		Hue

Picture 4-3 Color

Note: Click  to resume Initial values

Chapter 5 System

5.1 Device manager

5.1.1 Click to add zone, see below:

Refresh OK Cancel

Net Service: Set IP filter, DDNS, Email etc...see below picture

CAM Name: Add or modify camera name by your need, see below picture

PTZ config: Set PTZ parameters to make sure the same as speed cameras.

The screenshot shows the 'Device Config' window with the 'PTZ Config' option selected in the left-hand tree. The tree structure includes 'Remote Config' (Record, Alarm, System, Advanced, Info), 'System' (General, Encode, Network, NetService, GUI Display, PTZ Config, RS232), 'Advanced' (HDD Manage, Account, AutoMaintain, Default, Upgrade, Reboot), and 'Info' (HDD Info, LOG, Version). The right-hand pane displays the following settings:

Parameter	Value
Channel	1
Protocol	PELCOD
Address	1
Baudrate	9600
Data Bits	8
Stop Bits	1
Parity	None

At the bottom of the right-hand pane, there are five buttons: Copy, Paste, Refresh, OK, and Cancel.

RS232: Set RS232 port configurations, see below picture.

The screenshot shows the 'Device Config' window with the 'RS232' option selected in the left-hand tree. The tree structure is identical to the previous screenshot. The right-hand pane displays the following settings:

Parameter	Value
Function	Console
Baudrate	115200
Data Bits	8
Stop Bits	1
Parity	None

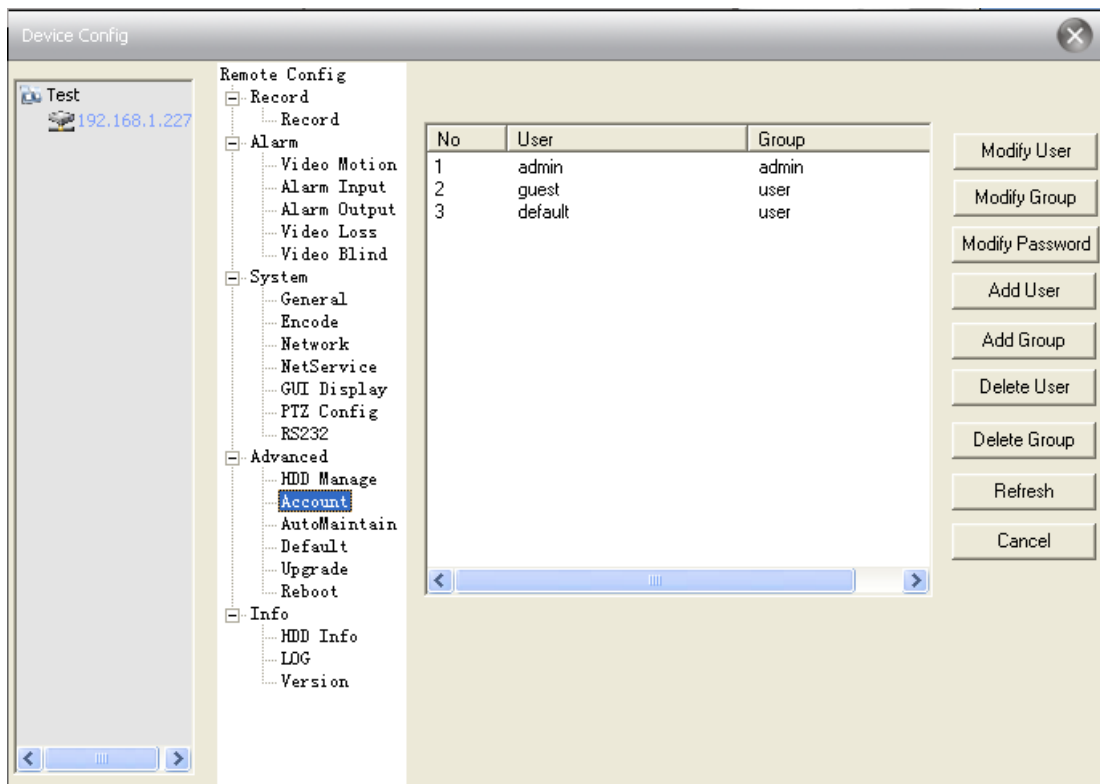

At the bottom of the right-hand pane, there are three buttons: Refresh, OK, and Cancel.

Advanced: Click Advanced to go into advanced interface.

HDD manage

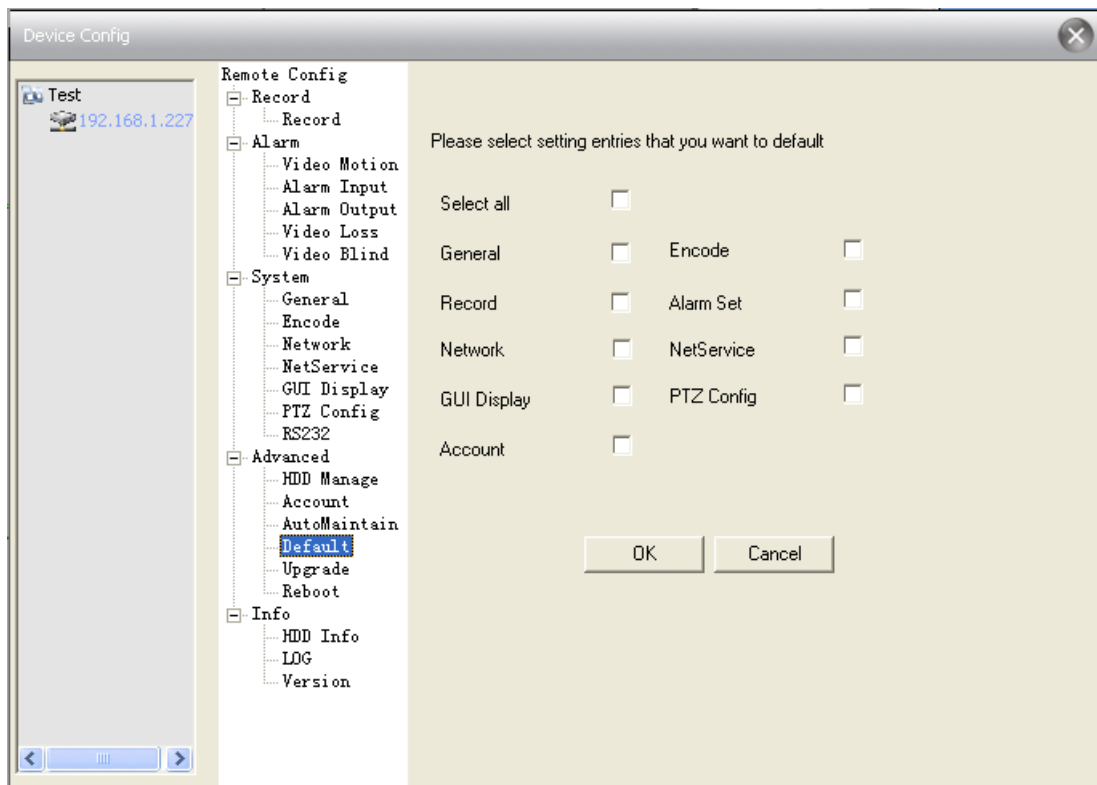

Account: Modify User, group, password, add user, group etc...see below picture:

Auto Maintain: Set Auto-Reboot time and files management, see below picture

Default: Restore to factory settings

Info Click Info to go into system info interface, see below picture:

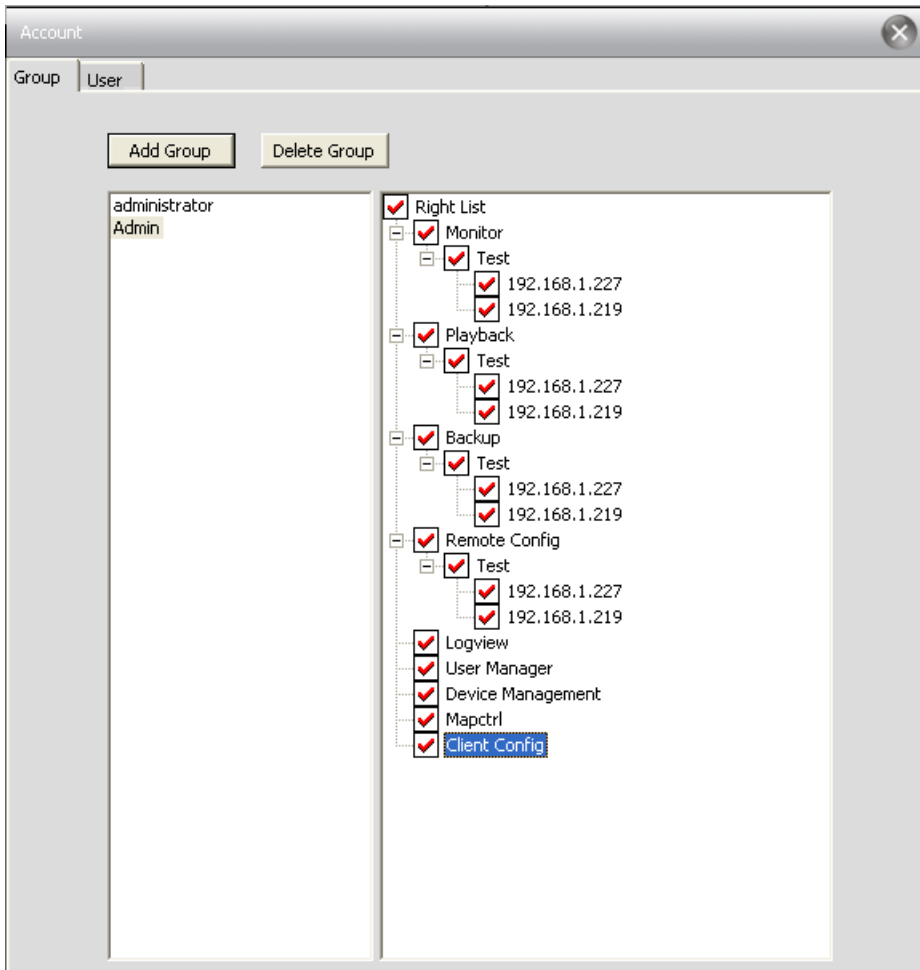

In system info, there are HDD info, LOG and Version.

Chapter 6 Account

6.1 Group

Add, delete group and set group right, see below picture:

6.2 User

Add, delete user and modify password

The screenshot displays the 'User Management' application window. At the top, there are two tabs: 'Group' and 'User', with 'User' being the active tab. Below the tabs are three buttons: 'Add User', 'Delete User', and 'Modify Password'. The main area contains a table with two columns: 'User' and 'Group'. The first row shows 'super' under 'User' and 'administrator' under 'Group'. A modal dialog box titled 'User' is open in the foreground. It has a green close button in the top right corner. Inside the dialog, there are four labeled text input fields: 'Group' (with a dropdown menu showing 'Admin'), 'User Name', 'Password', and 'Confirm'. At the bottom of the dialog are 'OK' and 'Cancel' buttons. The background table has a scrollbar on the right side.

Chapter 7 Local Log

User can search operation log, alarm log and other logs by time, see below picture.

Chapter 8 Record

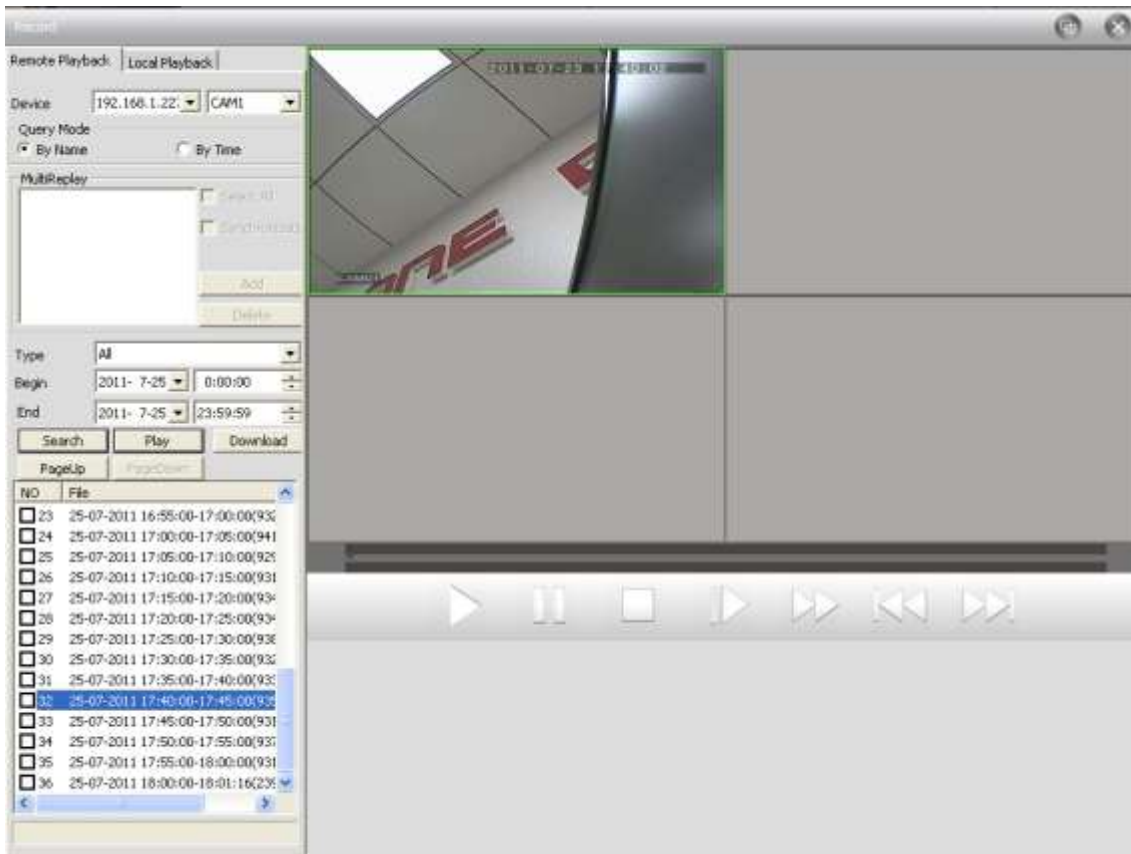

8.1 Playback

There are 2 playback modes---Remote playback and Local playback.

Remote playback: Playback at Device-side.

Local playback: Playback at Client-side.

User could playback record files of any times, max playback channels is 4.

Button instruction

No.	Button	Meanings
1		Play
2		Pause
3		Stop
4		Slow play
5		Fast play
6		Last frame
7		Next frame

8.2 Download & Backup

User could playback record files at set time and channels, select record files, click "Download/Backup" and select "save directory".

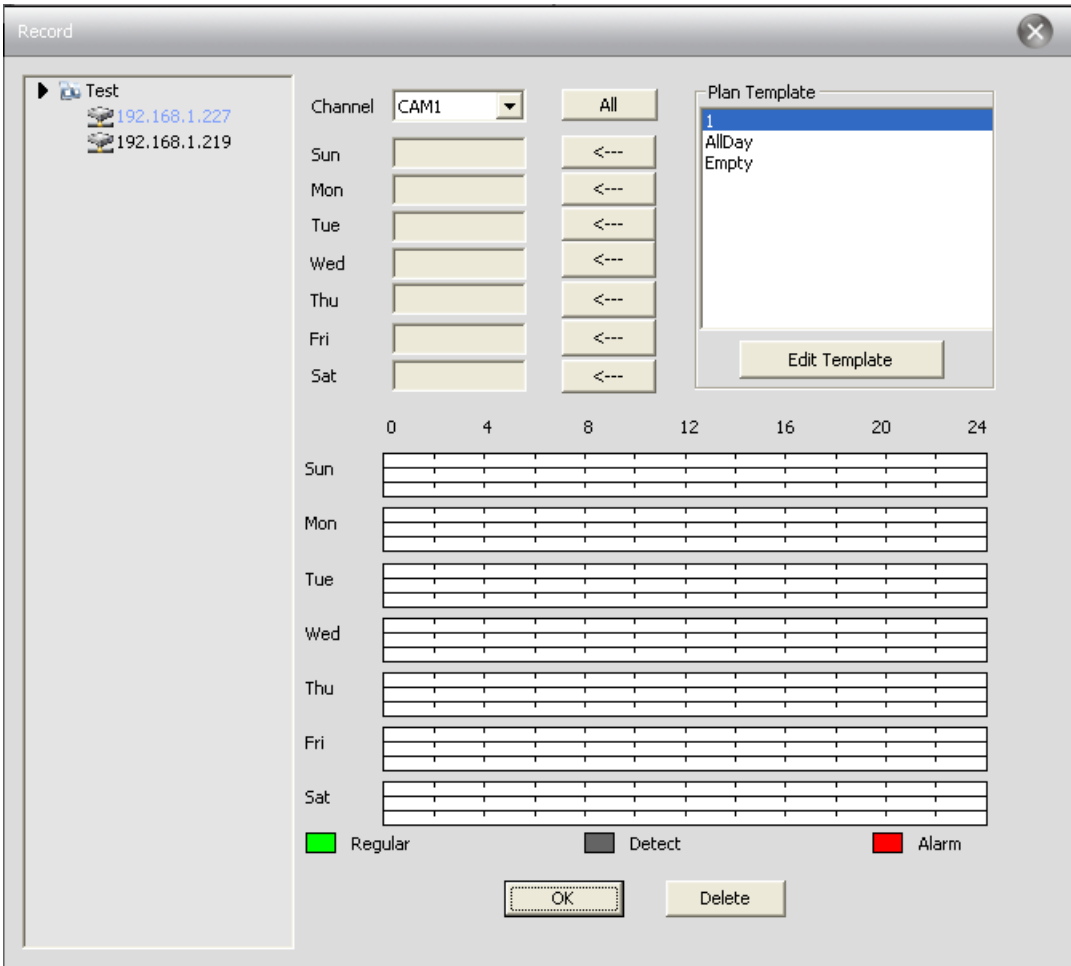

Note: Remote playback----Download

Local playback---Backup

8.3 Record plan

Set your record plan on any clocks and days, see below picture:

Edit Template, see below picture:

OK Delete

Note: After set record plan, If it need to record, please make sure the below 3 points:

1. Choose disk for recording at Local config.
2. Make sure the device is connected to network.
3. Make sure local computer is always open.

Chapter 9 Advanced

It contains two options---Decoder and Map.

9.1 Decoder

It can manage and config remote decoder very easy, sees below picture:

9.1.1 Add decoder

Right-click to add decoder, see below picture:

Device Name: Name of decoder, it is set by yourself

Domain: Domain name of decoder

IP address: IP address of decoder

Port: TCP port, default is 34567

User Name: Login name of decoder, default is admin

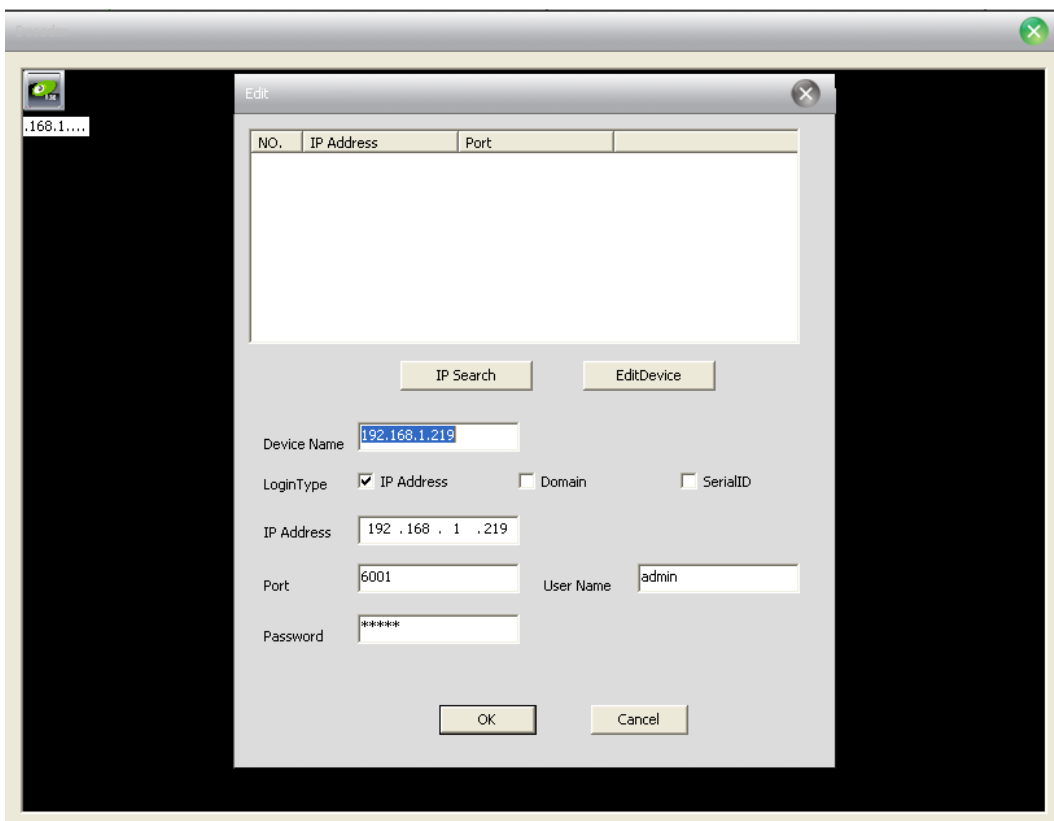

Password: Password of decoder

After you add decoder successfully, it will come out a "decoder" icon in this interface, right-click this icon to edit, delete and set attribute.

9.1.2 Edit

Right-click decoder icon to "edit decoder", see below pictures:

9.1.3 Set decoder Attribute

Right click "Attribute", see below picture:

In the device list of left side, select 1 camera, then select 1 camera of right side, at last click "Add" in the center, for example:

See above picture,

Decoder CAM01 decode output for "home-CAM2"

Decoder CAM02 decode output for "bank-CAM1"

Decoder CAM03 decode output for "supermarket-CAM1"

Decoder CAM04 decoder output for "car park-CAM4"

Delete decoder

Right-click to delete decoder

9.2 E-MAP

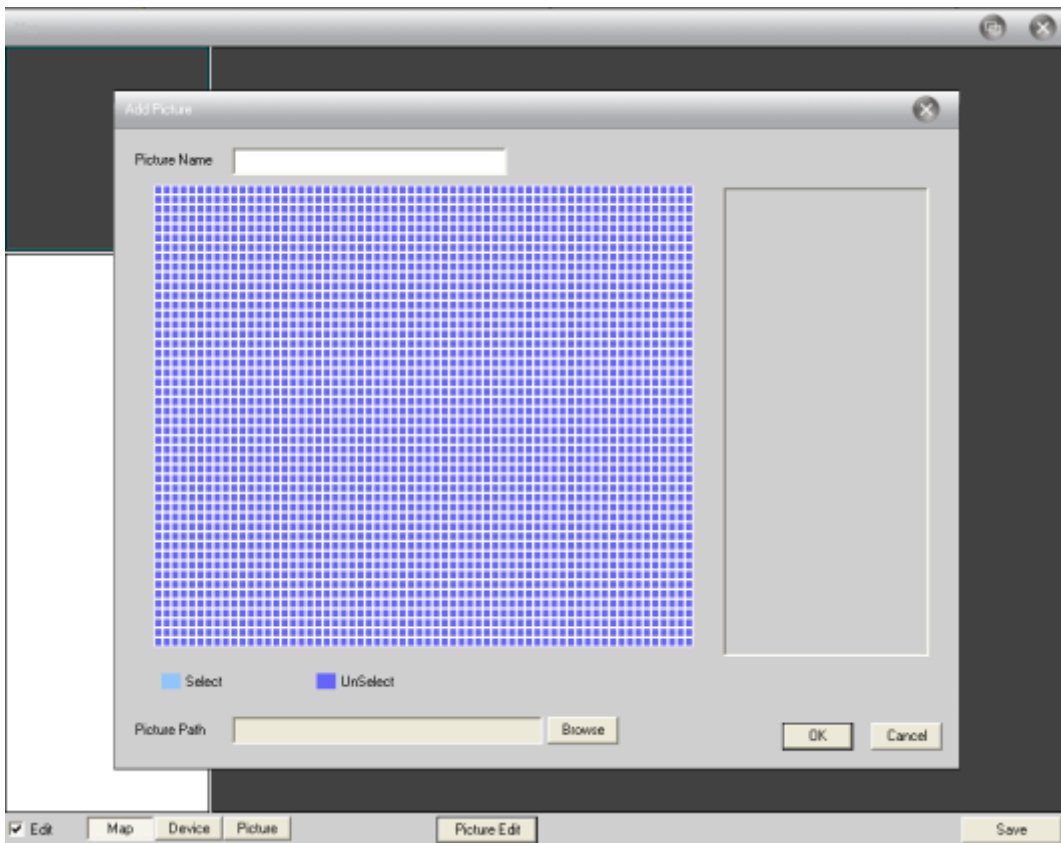

E-MAP is a plan for simulating live screen, user can use it to add & delete cameras and set e-map alarm activation, see below picture:

1. Click "Edit" first at the left bottom, then click "Picture Edit", see below picture:

2. Click "Add" to add picture, see below picture:

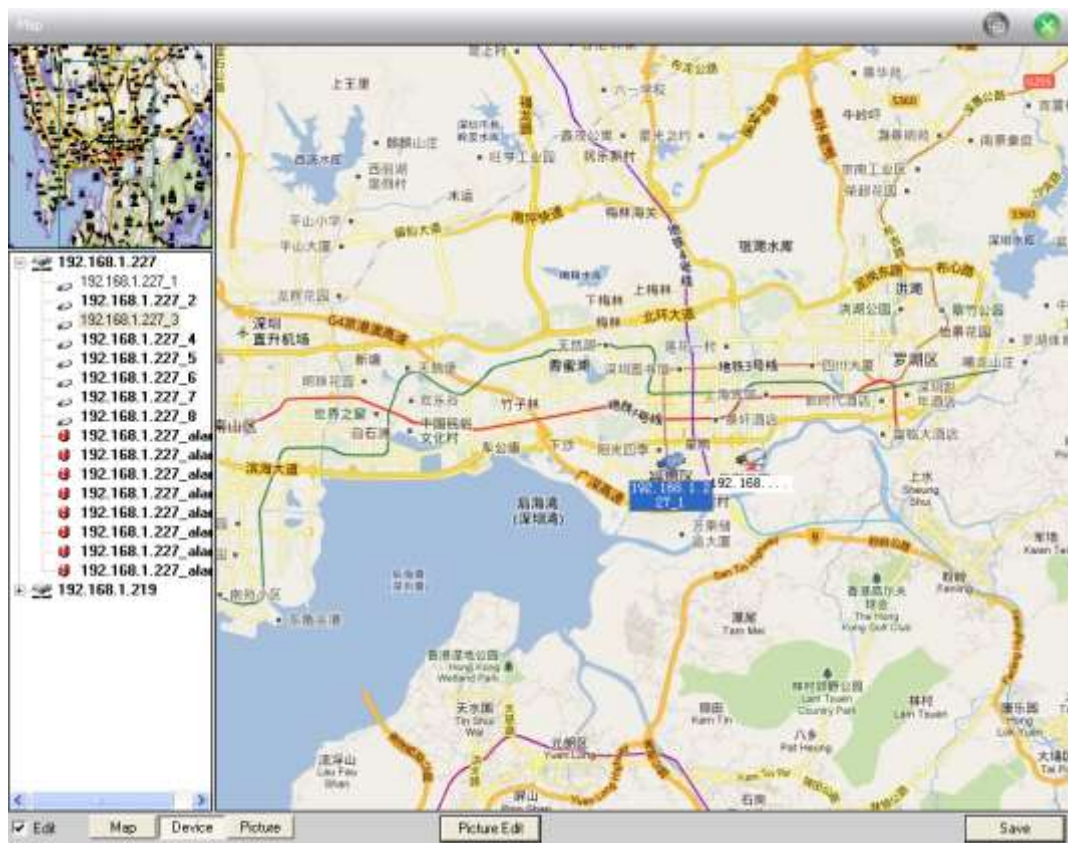

3. After set picture name, description, picture path, then click "OK" back to main interface.

Click "Picture" and drag 1 picture to the right side, see below picture:

4. Click "Device" to drag device's channel to the map, then the channel name will appear at the map, double-click it to name and describe it.

Appendix A Abbreviations

Abbreviation	Full name	Chinese meaning
CMS	center manager system	网络视频控制中心
DVS	Digital Video System	数字视频监控系统
PTZ	Pan/Tilt/Zoom	云台设备
TCP/IP	Transmission Control Protocol / Internet Protocol	传输控制协议/互联网协议

Appendix B Main parameters

Video Compression			H.264 main profile
Audio Compression			G711A
Video Resolution			D1/HD1/CIF/QCIF
Display resolution	Resolution	NTSC	704 x 480
		PAL	704x576
	Rate	NTSC	30FPS
		PAL	25FPS
Frame rate			30/25(NTSC/PAL) F/S
Video input			BNC input
Audio input			RCA input
Type of compressed code			Combine code
Rate of compressed code			32kbps ~ 2048kbps(adjustable)
Network Protocol			TCP/IP, static IP , DHCP , PPPoE
Net Interface			10/100M RJ45
PTZ protocol			Pelco-P/ Pelco-D/ Minking/ Linlin/ Neon/ Star/ Vido etc...
Remote Monitor			IE browse, CMS and Mobile
